

2004: Threatened and/or Impaired Waters that Require a TMDL (Section 303(d) Waters)

NOTES:

1. See the 2004 Consolidated Assessment and Listing Methodology (CALM) for details regarding how assessments were made.
2. TMDL stands for Total Maximum Daily Load study.
3. This map does not show threatened and/or impaired waters that do not require a TMDL.
4. In New Hampshire, fish/shellfish consumption advisories due to mercury are in effect for all surface waters. Waters impaired by mercury advisories were assessed as impaired and requiring a TMDL but were intentionally not shown on this map so that waters threatened or impaired by other causes and sources could be presented.
